[EXS]  
Recognise, find, name and write fractions **1/3**, 1/4, 2/4 and 3/4 of a length, shape, set of objects or quantity.

Reminder to use GT LT and equals symbols.

**Write simple fractions for example, 1/3 of 12 = 4 and recognise the equivalence of 2/4 and 1/2.**

- Counters
- Objects
- Hoops, cups or plates for sharing into.
- Numicon
- Unifix
- Money
- Dienes
- Dice
- Shapes
- Lengths of materials e.g., border paper.

Pictures of objects and groups.

Pictures of practical resources.

Arrays (That will divide by 3.)

Shapes (Regular + Irregular)

Tick the shape that has exactly 1/3 shaded.

Use the cubes to make 3 equal groups.

There are \_\_\_ cubes altogether.  
One third of \_\_\_ is \_\_\_  
 of \_\_\_ is \_\_\_

1/3 of 3 =  
1/3 of 6 =  
1/3 of 9 =  
1/3 of 12 =  
1/3 of 15 =  
1/3 of 18 =

Complete:

$\frac{1}{3}$  of 9 =      $\frac{1}{3}$  of 15 =   
 $\frac{1}{3}$  of 12 =      $\frac{1}{3}$  of 18 =

Annie has a piece of ribbon.

She cuts it into **three** equal parts.

**One third** of the ribbon is **6 cm long**.

How long would **half** the ribbon be?

Tick the correct bar model for the calculation  $1/3$  of 12 = 4:

How do you know?

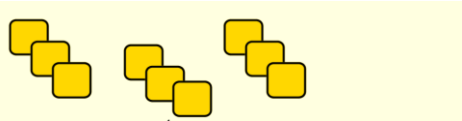

How do you know?

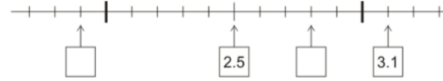

Dora says,

I have one third of a pizza because I have one slice and there are three slices left.

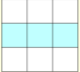

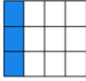

Do you agree? Explain your reasoning.

Explain your answer.</p> <div style="border: 1px solid black; height: 40px; width: 100%;"></div> |
|----------|---|---|--|---|---|---|

4. Complete the calculation using these number cards:

$$\begin{array}{ccc} \boxed{1} & \boxed{4} & \boxed{3} \\ \hline \square & - & \square \\ \hline 5 & & 5 \end{array} = \frac{\square}{5}$$

Is there more than one solution?

Find three ways to complete each calculation.

$$\frac{\square}{\square} + \frac{\square}{\square} = \frac{8}{9}$$

$$\frac{\square}{\square} - \frac{\square}{\square} = \frac{8}{9}$$

\*\*C. Compare the calculations below:

$$\frac{4}{12} + \frac{3}{12}$$

• True or False

$$\frac{5}{12} + \frac{3}{12} = \frac{8}{12}$$

$$\frac{5}{12} + \frac{3}{12} = \frac{8}{24}$$

$$\frac{5}{12} + \frac{3}{12} = \frac{4}{6}$$

Explain your reasoning.

\*Charlie has a cake cut into 10 equal pieces.

Charlie promises  $\frac{3}{10}$  of the cake to Oliver,  $\frac{4}{10}$  of the cake to Haydyn and  $\frac{5}{10}$  of the cake to Josh.

Charlie thinks he can keep his promise.

Do you agree? Explain your answer.

\*\*F. Jack took a test with 100 questions. Jack got half the questions correct, missed out 10 and got the rest incorrect.

Jack says: "The fraction of questions I got incorrect was  $\frac{30}{100}$ "

Is Jack's statement true or false? Explain your answer.

\*\*\*There are only two unique ways to add two amounts of halves to make a whole:

$$1/2 + 1/2 = 1 \text{ and } 0/2 + 2/2 = 1$$

We could swap the addends, but we don't need to as addition is commutative.

How many unique ways are there of adding amounts of quarters to create a whole? What about eighths?

Shape, space, measure and statistic opportunities:

Adding and subtracting fractions of length, weight or capacity as 2-star questions e.g.,  $1/5 \text{ m} + 2/5 \text{ m} = ? \text{ m} = ? \text{ cm}$

4

4F-1 Reason about the location of mixed numbers in the linear number system.

Was new in 2020/21

Folding / cutting activities with paper, card, cake etc.

Number lines with marked intervals

See 2020 gov guidance Y4 p48

Draw a number line. Put the following fractions on the line:

$1/2$ , 1 and  $1/4$ , 2 and  $1/2$ , 1 and  $3/5$ , 1 and  $3/4$

Fraction walls

Add labels to each mark on the number lines.

Estimate the position of the following numbers on the number line.

$2\frac{2}{9}$        $\frac{2}{3}$        $3\frac{3}{7}$        $1\frac{1}{5}$

How much water is in the beaker? Write your answer as a mixed number.

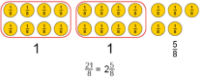

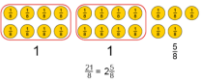

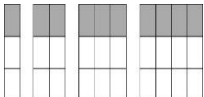

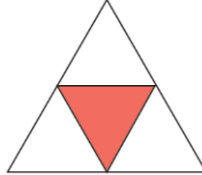

Circle the larger number in each of these pairs. Explain your reasoning.

$$3\frac{3}{9} \quad 3\frac{8}{9}$$

$$4\frac{1}{3} \quad 4\frac{1}{8}$$

$$2\frac{1}{3} \quad 1\frac{2}{3}$$

Are these equivalent?

Sam says:

"I know that  $\frac{1}{2}$  is equivalent to  $\frac{1}{4}$  as the numerators are the same."

Is Sam correct?

Explain why / why not.

\*Meave says "This shape is cut into four quarters"

Ngairé says "It can't be cut into quarters because the four parts don't all look the same"

What do you think?

What numbers could go in the boxes?

$$\frac{\quad}{3} = \frac{\quad}{6}$$

How many ways can you show me?  
Draw diagrams to convince me.

2. Use the digit cards below to fill in the boxes. How many different ways can you find?

4 8 3 6

$$\frac{1}{5} = \frac{2}{10} = \frac{4}{20} = \frac{8}{40}$$

Are these equivalent?  
Show me using bars.

Spot the pattern, explain the pattern using diagrams.

$$\frac{1}{8} = \frac{2}{16} \quad \frac{2}{8} = \frac{4}{16} \quad \frac{3}{8} = \frac{6}{16}$$

Can you continue the pattern?

Two paper strips are ripped. Which paper strip was originally the longest?

Explain your answer.

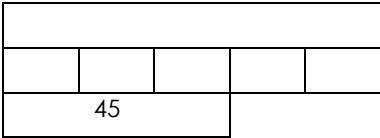

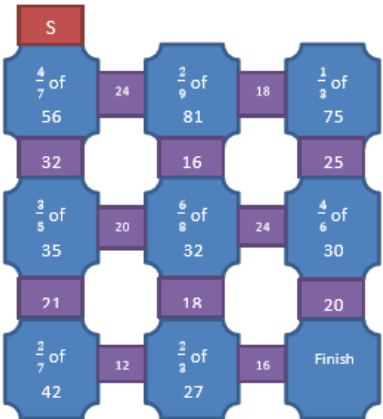

A pizza is cut into 8 slices. Zara says,

If I take half of the pizza, and my brother takes 4 slices, we will both have the same amount

Is she correct?

Convince me by using a diagram.

How many minutes do Liam and Jaden spend reading altogether?

\*\*\* Look at the equations below:

$$\frac{1}{2} \text{ of } 50 = \frac{1}{4} \text{ of } 100$$

$$\frac{1}{3} \text{ of } 60 = \frac{1}{9} \text{ of } 180$$

$$\frac{1}{2} \text{ of } 100 = \frac{1}{8} \text{ of } 400$$

Can you spot and describe a pattern between the denominators and whole numbers in the equations above?

Can you use this to complete the following equation without finding a fraction of an amount?

$$\frac{1}{2} \text{ of } 200 = \frac{1}{10} \text{ of } \boxed{\phantom{000}}$$

The school kitchen needs to buy carrots for lunch. A large bag has 200 carrots and a medium  $\frac{3}{5}$  bag has  $\frac{3}{5}$  of a large bag.

Mrs Rose says:

I need 150 carrots so I will have to buy a large bag.

Do you agree with Mrs Rose? Explain your answer.

Shape, space, measure and statistic opportunities:

Fractions of measure where conversions are needed (  $\frac{2}{5}$  of metre,  $\frac{3}{4}$  of a litre,  $\frac{5}{6}$  of an hour)

4

Count up and down in hundredths; recognise that hundredths arise when dividing an object by one hundred and dividing tenths by ten.

Coins, £1 and 1p  
Counters

Number lines  
Pictures of objects split into 100.

Here is a diagram with  $\frac{20}{100}$ ths shaded. Shade 2 hundredths more. How many hundredths are shaded in total?

This diagram has 47 hundredths shaded, how much more do I need to shade to have 60 hundredths (or 6 tenths if pushing GD) shaded?

Missing fraction sequences.

Bar models for comparing tenths to hundredths

Complete these calculations:

i.  $\frac{16}{100} + \frac{24}{100} =$

ii.  $\frac{78}{100} - \frac{23}{100} =$

iii.  $\frac{79}{100} + \frac{\quad}{100} = 1$

iv.  $\frac{80}{100} - \frac{\quad}{100} = \frac{32}{100}$

Complete the bar models below:

\*\*James has £4. He spends three-tenths on his money on a magazine and  $\frac{45}{100}$  on a sandwich.

How much money does James have left?

Complete the bar model below:

Give the missing number as both a fraction and a decimal.

Miss Tonkin says:

You can't write a number greater than 1 in hundredths, the largest number you can write in hundredths is  $\frac{100}{100}$ .

Do you agree with Miss Tonkin?

Explain why / why not.

Oliver says:

"If I add two amounts of hundredths together my total **will always need an amount of hundredths**, for example  $0.41 + 0.42 = 0.83$  ; There are 3 hundredths there."

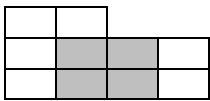

Mr Moore doesn't agree, and gives the example

$0.13 + 0.17$

Explain how Mr Moore's example **disproves** Oliver's conjecture.

Shape, space, measure and statistic opportunities:

Count up and down in fractions of a metre.

Bar Model

Jack buys 10 boxes of apples for £12.

How much does one box of apples cost?

Kiera buys 10 pens for £9.

Mrs George buys 100 pens for £80.

Whose pens were cheaper?

Show your workings.

Which equation matches the answer shown in the place value grid below?

$10 \div 8 = 0.8$   
  $8 \div 10 = 0.8$   
  $0.8 \div 10 = 8$

| Tens | Ones | Tenths | Hundredths |
|------|------|--------|------------|
|      | 0    | 8      |            |

Find a path

Can you find a path from 6 to 0.06?

You can move horizontally or vertically but **not** diagonally

|   |           |             |           |
|---|-----------|-------------|-----------|
| 6 | $\div 10$ | $\times 10$ | $\div 10$ |
|---|-----------|-------------|-----------|

Sam buys 10 pens for £7.

Mrs George buys 100 pens for £70.

Mrs George says, "My pens must cost more **each** because I paid more." Is Mrs George correct?

Describe the pattern.

$$7,000 \div 100 = 70$$

$$700 \div 100 = 7$$

$$70 \div 100 = 0.7$$

$$7 \div 100 = 0.07$$

Can you complete the pattern starting with 5,300 divided by 100?

Teddy says,

45 divided by 100 is 0.45  
so I know 0.45 is 100 times smaller than 45

Mo says,

45 divided by 100 is 0.45  
so I know 45 is 100 times bigger than 0.45

Who is correct?

Explain your answer.

|-----------------|--|--|--|--|---|---|

and then buys a football costing £8.55.

How much money does Steven have left?

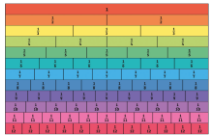

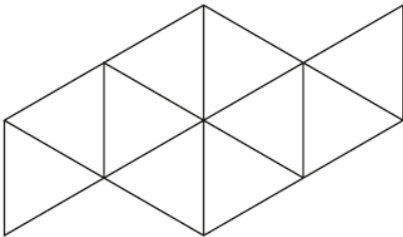

Mr Walden needs 1m of wood for a shelf in his office.

The hardware shop sells two lengths: a 3m length for £4.50 of a 4m length for £5.80.

Mr Walden is happy to cut the wood; he just wants the cheapest length **per metre**.

Which length should Mr Walden buy?

same number.

such as cucumbers

Paper shapes that can be cut up.

\*Put the fractions below in ascending order:

\*Put the fractions below in descending order:

\*Put the fractions below in ascending order:

GT and LT symbols

Move the equals sign

Bar Model / Fraction wall

$$\frac{13}{15} > \frac{7}{5}$$

Draw diagrams to show that this number sentence is incorrect:

$$\frac{13}{16} > \frac{7}{8} > \frac{3}{4}$$

\*\*Kaci reads  $\frac{3}{4}$  of her book one night then  $\frac{1}{8}$ th of her book the next night. How much of her book did she read in total?

How much has she got left to read?

Explain your reasoning.

Which is closer to 1?

$$\frac{7}{8} \text{ or } \frac{23}{24}$$

Explain how you know.

Mr Moore thinks three fifths is closer to a half than four tenths.

Is Mr Moore correct?

Can you prove it calculations?

Convince Mr Moore of your answer with some diagrams.

\*\*Kyle and Dominic are comparing the two fractions below:

$$\frac{5}{4} \text{ and } \frac{17}{20}$$

Kyle says " I don't need to convert  $\frac{5}{4}$  into twentieths to know that  $\frac{5}{4}$  is larger than  $\frac{17}{20}$ .

Explain how Kyle knows this.

Shape, space, measure and statistic opportunities:

Comparing fractions of length, weight and volume.

5

Add and subtract fractions with the same denominator and denominators that are multiples of the same number.

Numicon! Think of staff meeting example.

“Cuttable” food items, pizzas, cake, apples. Include non-circular items, such as cucumbers

Paper shapes that can be cut up.

Shading parts of a diagram. (Not always circles or squares.)

Cutting up fractions to add or subtract which emphasises the size doesn’t change, just the number of parts.

Number sentences

Missing numbers

Missing symbols

GT and LT symbols

Move the equals sign

Bar Model / Fraction wall

Complete these number pyramids, where each block is the sum of the two blocks directly underneath.

Liam and Caitlin each have a bar of chocolate. They eat the shaded amount of each bar shown below:

How much did they eat in total?

Mr Moore and Ms Palk have a chocolate cake each. Mr Moore eats three quarters of his and Ms Palk eats 1/2 of hers.

How much cake do they eat in total?

How much cake is left?

Daniel uses the following representation to show that:

$$\frac{7}{8} + \frac{5}{8} = \frac{12}{16}$$

Is he correct? If not, explain why.

Victoria has a bag of sweets. She says:

“I’m going to give three fifths of the bag to Harvey and 14/20 of the bag to Kieran”

Prove that Victoria cannot do this.

Ole has 7/8ths of a whole bar of chocolate and then eats 3/8ths of the whole bar.

Ole says: “I have half a bar of chocolate left”

Grace says “You can’t have a half because that would give you a denominator of 2, you should have a denominator of 8.

Explain why Ole is correct.

Shape, space, measure and statistic opportunities:

Adding fractional lengths / weights. Finding the perimeter of regular shapes with fractional lengths.

5

Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements greater than 1 as a mixed number [for example,  $2/5 + 4/5 = 6/5 = 1 \frac{1}{5}$ ]. Pictorial is the most powerful way of embedding pupil's understanding of the concept.

This was introduced in Y4 as a non-statutory objective that was covered in 2020/21. Pre-teach / DA to determine how much they recall and proceed from

"Cuttable" food items, pizzas, cake, apples. Include non-circular items, such as cucumbers  
Paper shapes that can be cut up.

Shading parts of a diagram. (Not always circles or squares.)  
Below are six shaded amounts. For each, write the amount shaded as an improper fraction on the left and a mixed number on the right.

Number sentences  
Missing numbers  
Missing symbols  
GT and LT symbols  
Move the equals sign  
Bar Model / Fraction wall

Jamie eats  $7/8$  of a pizza and Sarah eats  $5/8$  of a pizza. How much did they eat altogether?

Give your answer as a mixed number.

\*\*Insert numerators to make this number sentence correct:

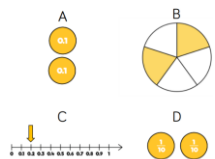

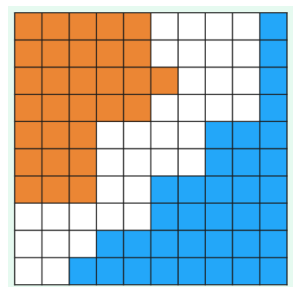

$$3\frac{\quad}{5} < \frac{\quad}{5}$$

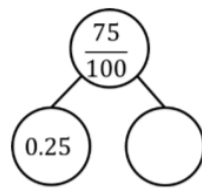

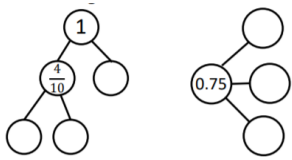

Tim has  $2 \frac{1}{2}$  cakes and Julie has nine quarters of cake. Who has more? Prove your answer.

\*\*Write 3 **improper fractions** that are equivalent to **5**.

\*\*\*Can you describe the relationship between the denominator and the numerator for **all** improper fractions that are **equivalent to 5**?

# Year 6

**Objectives running through the unit** [EXS] Use written division methods in cases where the answer has up to two decimal places.  
 Identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places.

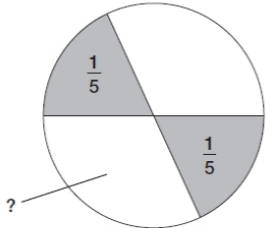

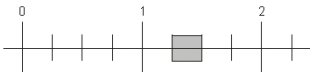

| Year group: | NC L.O.   | Practical  | Pictorial  | Abstract   | Problem Solving   | Reasoning   |
|-------------|---|--|--|--|---|---|
| <b>6</b>    | Use common factors to simplify fractions; use common multiples to express fractions in the same denomination. | <p>"Cuttable" food items, pizzas, cake, apples.<br/>           Include non-circular items, such as cucumbers</p> <p>Paper shapes that can be cut up.</p> | Shading parts of a diagram. |   |   |   |   |   | <p>'There are twice as many children in front of me as there are behind me'.</p> <p>How many children are in front of Nik?</p>  |  |
| 6 | Solve problems involving unequal sharing and grouping using knowledge of fractions and multiples. | Unequal sharing of counters between two or more groups. | <p>Share the squares below in the ratio 2:3</p>  | <p>Share 600 in the ratio 3:5</p> <p>Andy writes a ratio <b>equivalent</b> to 4:5.</p> <p>One of Andy's numbers is 64.</p> <p>What could the other number be? Could you give both possible answers?</p> | <p>Sapna makes a fruit salad using bananas, oranges and apples.</p> <p>For every one banana, she uses 2 oranges and 3 apples.</p> <p>Sapna uses 24 fruits.</p> <p>How many oranges does she use?</p> <p>A gardener plants tulip bulbs in a flower bed.</p> <p>She plants 3 red bulbs for every 4 white bulbs.</p> <p>She plants 84 bulbs altogether.</p> <p>How many white bulbs does she plant?</p> <p><b>**Mary, Kate and Ashley share some money in the ratio 7:3:2.</b></p> <p>If Ashley receives £28, how much does Mary receive?</p> <p>How much money was shared out in total?</p> | <p>Dylon, Jack and Jacob are trying to share out some PS5 games in the ratio 3:4:5</p> <p>There are 90 games to share out.</p> <p>Can the 3 complete the task?</p> <p>Explain why / why not.</p> |
| 6 | Solve problems involving similar shapes where the scale factor is known or can be found.          | Congruent shapes, including irregular shapes            |   | <p>Draw the shape below, scaled by a ratio of 1:3.</p>  | <p><b>**Amber has a square patch of grass in the middle of a patio, as in the diagram below:</b></p>  | <p>* Ben says</p> <p><i>"I scaled the hexagon on the left by a factor of two to get the shape on the right".</i></p> <p>Do you agree with Ben's drawing?</p>                                     |

Draw the shape below, scaled by a ratio of 1:2.

Ashleigh creates a similar design scaled in the ratio 2:1.

What is the **area** of Ashleigh's patio?

\*\*\* Mr Moore says:

*"If you scale a square by a ratio of 1:2 the area of the new square will be double the area of the original square"*

Investigate this, is Mr Moore correct?
